Alerting Abstract KR A

NOVELTY - The service system comprises CPs (600, 700), an electronic **gift certificate** service system (200), and a mobile communication service system (100). The CPs install electronic **gift certificate** transceiver modules (610, 710) within a system, which can be downloaded or purchased from the electronic **gift certificate** service system. Users can access the CPs over a wired or wireless network by using a personal computer or a mobile terminal.

DESCRIPTION - The electronic certificate service system is connected directly to the mobile communication service system, and the electronic **gift certificate** transceiver modules via the mobile communication service system or the internet(400).

USE - An electronic **gift certificate** transceiver module and method, and its service system and method are provided to offer electronic certificates via general CPs(Contents Providers).

DESCRIPTION OF DRAWINGS - The drawing shows a diagram of the system (Drawing includes non-English language text).

Alerting Abstract KR A

NOVELTY - A method for circulating an electronic **gift certificate** in an online system and an offline system is provided to simplify an electronic **gift certificate** service system by collectively process the certificate service and the mobile communication service.

DESCRIPTION - The method comprises several steps. A certificate service server receives a **gift certificate** request signal from a mobile terminal or a personal computer of a user(S110), and checks whether the user is a member by using a user code included in the **gift certificate** request signal(S120). If the user is a member, the server checks whether the user owns a **gift certificate** already(S130). If the user is not a member, the user subscribes for the server as a member and then purchases the **gift certificate** (S130'). The user selects the kind and the number of the **gift certificate**, and data on an assignee of the **gift certificate**, e.g. a mobile phone number(S140, S150). The user selects other gift for sending with the certificate(S160). Then the server transmits the gift list to the user for allowing the user to check the gift list(S170). According to an affirmative answer from the user, the server transmits the gifts, including a **gift certificate**, to an assignee(S180).

Alerting Abstract KR A

NOVELTY - A mobile communication system, and a **gift certificate** service system are provided to simplify an electronic **gift certificate** service system by collectively processing the certificate service and the mobile communication service.

DESCRIPTION - The system comprises a mobile communication service system and a **gift certificate** service system(200). The **gift certificate** service system(200) manages a sale, a transfer and a usage of an electronic **gift certificate** according to a request from a mobile terminal via the mobile communication service system. The **gift certificate** service system(200) includes a **gift certificate** server(220), a **gift certificate** management database(230), and a network server. The **gift certificate** server(220), connected to the mobile communication service system, offers a **gift certificate** purchase, transfer and usage service to a customer via a mobile terminal. The **gift certificate** management database(230), connected to the **gift certificate** server(220), stores data on the **gift certificate**, and responses to a usage query from the **gift certificate** server(220). The network server, connected to a wired or wireless network, plays a role of a customer interface for a certificate purchase, transfer and usage.

English Abstract:

Disclosed is an electronic **gift certificate** circulating method for a **gift certificate** service system including a **gift certificate** database and a **gift certificate** service server to manage sales of the electronic **gift certificates** according to requests by a communication terminal through wired and wireless networks, comprising: receiving a user's purchase request from the communication terminal; checking a settlement state of the electronic **gift certificate** bought by the user; settling the electronic **gift certificate** bought by the user, and issuing the bought electronic **gift certificate** to the user, when the user requests settlement; storing the issued **gift certificate** information in the **gift certificate** database; and notifying the user of the **gift certificate** purchase particulars in a message format.

English Abstract:

Disclosed is an electronic **gift certificate** circulating method for a **gift certificate** service system including a **gift certificate** database and a **gift certificate** service server to manage sales of the electronic **gift certificates** according to requests by a communication terminal through wired and wireless networks, comprising: receiving a user's purchase request from the communication terminal; checking a settlement state of the electronic **gift certificate** bought by the user; settling the electronic **gift certificate** bought by the user, and issuing the bought electronic **gift certificate** to the user, when the user requests settlement; storing the issued **gift certificate** information in the **gift certificate** database; and notifying the user of the **gift certificate** purchase particulars in a message format.

Alerting Abstract KR A

NOVELTY - The apparatus and system for e-trading integrating on/off line using internet are provided to solve problems related to a paper-made **gift certificate** by using a card for paying a paper-made/ **mobile phone gift certificate**.

DESCRIPTION - A customer terminal comprises a web browser(110) to connect to a web server, a gift certificate combination card(130), a paper-made gift certificate(140), and a gift certificate for outputting on a screen of a **mobile phone** or a **wireless internet terminal**(150). A customer(100) is **registered** as a member of a web server(200) and has an ID and a password(120). The web server(200) issues a gift certificate combination card(130), a paper-made gift certificate(140), and a gift certificate for outputting on a screen of a **mobile phone** or a **wireless internet terminal**(150) and supplies services for issuing, selling, managing, paying a **gift certificate** of each company or group. A member **store unit**(300) indicates an **off-line trader** which has a credit card paying terminal(310) and a **gift certificate** card for paying a paper-made/**mobile phone gift certificate**(320). A **gift certificate** issuing trader unit(400) indicates traders or groups to issue a **gift certificate** sold by the web server(200).

Alerting Abstract KR A

NOVELTY - A system for supplying a call **gift certificate** in a **mobile communication network** is provided to implement call **gift certificates online**, and to automatically manage usage of the call **gift certificates** in a **wireless terminal accounting server**, thereby preventing a risk of loss with an easy-to-use function.

DESCRIPTION - A database(110) stores **terminal user** information and call **gift certificate** information. A user authenticator(102) confirms whether a call **gift certificate** user and a **wireless terminal** user receiving a call **gift certificate** are legal users in reference to the database(110). A call **gift certificate** manager(104) manages kinds of call **gift certificates** stored in the database(110). A call detail manager(106) manages communication service usage details of the **wireless terminal** user, and transmits the call details to an accounting server.

Alerting Abstract JP A

NOVELTY - The **server** stores the image information and receiving party information comprising intrinsic identification (ID) address of print image. The **server** searches the image database to identify the currently recorded image based on the print ID address received from the user. The searched image is notified to the receiving party **terminal** and shop **terminal** (70) to carry out printing.

DESCRIPTION - An **INDEPENDENT CLAIM** is also included for shop **terminal**.

USE - For managing print images related to concert tickets, e- mail text, catalogue and gift certificate in internet based printing services.

ADVANTAGE - Enables printing the user preferred image easily by transmitting the image to printing **terminals** installed at each shop.

DESCRIPTION OF DRAWINGS - The figure shows the block diagram of the mail print system.

Alerting Abstract KR A

NOVELTY - An **electronic gift certificate** solution based on an information medium is provided to supply various commodity purchasing methods by off-line or on-line after purchasing an **electronic gift certificate** through the **Internet**.

DESCRIPTION - A consumer visits a **web site** having an **electronic gift certificate** solution on the **Internet**, and purchases an **electronic gift certificate**. The consumer pays a price of the **electronic gift certificate** using a credit card or through a bank account. The consumer uses the **electronic gift certificate** for paying a commodity purchased through the **Internet**. Also, the consumer uses the **electronic gift certificate** for paying a commodity at off-line store. At this time, the consumer submits an authentication number endowed in an **electronic gift certificate** selling company. If the consumer wants to present the **electronic gift certificate** to other person, the **electronic gift certificate** selling company transmits the authentication number to the other person through a **mobile phone** or **E-mail**.

Alerting Abstract KR A

NOVELTY - A system for dealing a **gift certificate** using a communication **network** is provided to enable the **gift certificate** issued through the communication **network** to be dealt or transferred through a personal **mobile terminal**.

DESCRIPTION - The communication **terminals**(103,104) receive/store the coupon information for the communication coupon issuance and generate the purchase information for a deal. An affiliated **store terminal** (111) communicates the **exchange** information after purchasing the coupon purchase and **exchanging** the coupon with a product. A financial company **server**(107) **stores** the account information of a coupon issuing company and the coupon price information based on the coupon dealing information provided from a coupon issuing company **server**(112), carries out an account transfer service using an account transfer system(117), and generates and transmits the coupon number information according to the completion of the account transfer service. The **server** generates the approval information through a transaction approval procedure and transmits the approval information to the affiliated store **terminal**.

Alerting Abstract KR A

NOVELTY - A method for providing information by using a geographical information system on the **Internet** is provided so that an information provider and an information receiver can exchange information by notifying an actual position of the information provider and the information by using the geographic information system.

DESCRIPTION - A user accesses a main **web site** for providing information(S100), and moves to an information page to obtain wanted information(S200). The **user** selects a plurality of information contents **stored** in a database, such as events, public information, business opening, simple information, logistics, traffics(vehicles), tourist attractions and remains, and decides whether to use a geographic information state(S300). The user inputs a keyword to search the wanted information such as regions, firm names, products, persons, real estates, movable property, tourist attractions, restaurants, companies, stores, remains, **gift certificates**, discount tickets, discount information, intellectual property-related information, technologies, administrative institutions, educational information, articles, geographical information, **electronic commerce**, computers and **Internet** sites(S400). To use the geographic information system, the user should have a **mobile phone** having a GPS chip or a computer connected to a GPS **terminal**.

NOVELTY - A customization code is generated using the data received from a sender, and is transmitted to a user along with the gift information. The non-customized information stored in a compact disk (62) along with a control program are selected using the customization code, and is displayed to the user.

DESCRIPTION - An INDEPENDENT CLAIM is also included for customized gift.

USE - For providing customized card/gift such as **greeting cards** e.g. birthday card, mother's day card and special occasion cards, gifts like gem/birthstone, birth flowers, **cellphones**, software, movie, videos, tickets, clothing, fashion products, cologne/perfumes, dining and small vacation packages, etc with information stored in compact disk (CD) e.g. CDROM, recordable CD, DVD, etc, to specified person through **Internet**.

ADVANTAGE - The gifts are easily and efficiently provided to the user and is customized by the user for a particular intended recipient. Thus, the CD for the recipient is personalized without the need to actually provide a custom CD.

DESCRIPTION OF DRAWINGS - The figure shows an exploded view of the instant **gift/card** providing device.

NOVELTY - The digital file is supplied to client from a **server** based on selection of clickable graphic from displayed **web page**. The digital file having coupon offer and contact data is supplied from client to **portable** computing device. The coupon offer and contact data are stored in a database in **portable** computing device.

DESCRIPTION - The coupon offer is redeemed at retail establishment. The digital file includes data regarding map, hyperlink to **web site** and reminder dates.

USE - For distribution of **electronic** coupon, **gift certificate**, for distribution of **virtual** discounts by advertiser.

ADVANTAGE - Enables automatic update of contact data associated with coupon provided such as address, **web site** URL, map and **e-mail** in **PDA** contact file. Enables redemption of coupon for **online** purchase by contacting **PDA** to **web site**. Facilitates easy organization of **virtual** coupons in different groups such as food, entertainment, travel and retail. Reduces advertisements cost reliably.

DESCRIPTION OF DRAWINGS - The figure shows block diagram of client- **server** system.

Alerting Abstract US A

NOVELTY - Data to be entered on **gift certificate** is selected by surfing greeting stores (A,B,C) which are connected to the **internet**. The payment for the certificate is done over the **internet** through a credit card. The composite **greeting card** comprising the **greeting card** and certificate is displayed on video screen (14) for user preview, before printing by printer (17).

DESCRIPTION - A **greeting card** is downloaded in a computer (12) from a **greeting card** software (15) and a **gift certificate** from a **gift certificate** software (16).

USE - For composite **greeting card** production.

ADVANTAGE - User does not have to go to a **shop** to select from a range of cards and gift items hence reducing physical constraints. Mode of payment is easy. Consumes less processing time.

DESCRIPTION OF DRAWINGS - The figure shows block diagram of computer printer **terminal** linked with **internet**.

The method of claim 189, further comprising the steps of the at least one POS terminal looking up through the POS system the amount to be charged for the lottery game...from the group of items consisting of a money order, a rebate check, and a **gift certificate**. 196. The method of claim 189, the step of printing the item including the step of a purchaser verbally instructing a sales clerk at the at least one POS terminal of the monetary value of a negotiable document to be printed thereat, the sales clerk manually entering the monetary value into the at least one POS terminal. 197. A system for selling and dispensing an item having monetary value for use in a store, the store having a **networked POS system** with at least one POS terminal having a bar code reader adapted to scan product identification codes of items offered for... ..a predetermined product identification code thereon for being scanned at the at least one POS terminal; a POS monitor in communication with the at least one POS terminal; the POS monitor being constructed and arranged to detect the scanned product identification code and... ..the item to be sold; and an item dispenser at the at least one POS terminal having a supply of the items to be dispensed housed therein; and wherein the POS... ..dispense the item selected for purchase, the POS monitor informing the at least one POS terminal of the amount to be charged for the item so dispensed. 198. The system of... ..the items selected from the group of items consisting of postage stamps, telephone calling cards, **gift certificates**, debit cards, and money orders of a predetermined monetary value. 201. A system for selling an item having monetary value for use in a store, the store having a **networked POS system** with at least one POS terminal, the at least one POS terminal having a bar code reader adapted to scan product identification codes of items offered for... ..a predetermined product identification code thereon for being scanned at the at least one POS terminal; a POS monitor in communication with the at least one POS terminal; the POS monitor being constructed and arranged to detect the scanned product identification code and... ..respectively, the items selected for purchase, the POS monitor informing the at least one POS terminal of the amount to be charged for the item so dispensed and printed, respectively. 202... ..the items selected from the group of items consisting of postage stamps, telephone calling cards, **gift certificates**, debit cards, and money orders of a predetermined monetary value. 203. The system of claim...

In case of rechargeable card, trading company issues a card to user and... first, are deposited after the deposit period. (Description of a method of selling articles using **gift certificate**) 62 Another example of the present invention is a method of selling articles using **gift certificate**, i.e. object of sale is **gift certificate**. Figs. 39a and 39b are flowcharts illustrating the purchase process of the **gift certificate** according to an embodiment of the present invention. Users who want to purchase articles login to the homepage of the present invention using personal computer or **mobile communication devices**. Once **membership** registration and identification are confirmed, users can browse detailed information of articles and current status... ..are flowcharts illustrating a process of purchasing the articles using substitute of cash such as **gift certificate**, where members buy **gift certificates** instead of general article. (1) Registration and Display of Purchasing Ticket Information This step is... ..article and recording and displaying the information about the issued purchasing tickets. Users connect to **server**. Registration of users entering shopping mall by connecting homepage is checked. If a user is not **registered**, the user will be lead to **membership** registration step to facilitate registration. If a user has **membership**, the user will be approved to enter shopping mall and browse articles. For example, a user who wants to browse **gift certificate** category clicks "company **gift certificate**" button on the homepage screen of Fig 2. Then **gift certificates** for electronics and apparel are displayed on screen. Article name, price, purchasing ticket price, number... ..sold purchasing 63 ticket(s), and selection are

displayed on the screen.

English Abstract:

A system and method (20) for creating, distributing and redeeming service tokens (4000) enables an entity to associate a token (4000) with certain services which may be used by another. A service token (4000) of the present invention comprises both authentication information (4100) and service provision (4200) and is transferable. In one embodiment of the invention, the system and method are directed to facilitating a telephone call between a first and second party.

French Abstract:

L'invention concerne un systeme et un procede pour la creation, la distribution et le remboursement de jetons, permettant a une entite d'associer un jeton avec certains services pouvant etre utilises par une autre entite. Un jeton de service de l'invention comprend des informations d'authentification et une proposition de service et est transferable.

English Abstract:

A loyalty program tracking and conversion system that permits users to enter relevant information and data regarding frequent flyer or other loyalty programs whereby the system stores the information regarding the status of award points under the programs. The user can access this information via a communications network such as the Internet as well as shop for products and services from a variety of retailers. The system calculates an equivalent number of universal or system credits based on the award points from the various loyalty programs registered by the user. The user can use the credits to reduce the price of the products and services purchased through the

system. These credits may be purchased for one's own account or for others, transferred between accounts for a fee, and may also be purchased by business entities as incentives or considerations for employees or customers.

French Abstract:

L'invention concerne un système de suivi et de conversion de programme de fidélisation qui permet à des utilisateurs d'introduire des informations et des données pertinentes associées à des programmes pour grands voyageurs ou d'autres programmes de fidélisation. Le système stocke les informations associées à l'état des points de fidélisation obtenus dans ces programmes. L'utilisateur peut avoir accès à ces informations au moyen d'un réseau de communications de type Internet, et peut également acheter des produits et des services chez divers détaillants. Ce système calcule un nombre équivalent de crédits universel ou de crédits système en fonction des points de fidélité provenant des divers programmes de fidélisation auxquels participent l'utilisateur. L'utilisateur peut utiliser les crédits pour réduire le prix de produits et de services achetés par l'intermédiaire du système. Ces crédits peuvent être achetés pour un compte personnel ou pour d'autres comptes, transférés d'un compte à un autre moyennant des frais, et peuvent également être achetés par des entités commerciales en guise de primes ou de contreparties à l'intention d'employés ou de clients.

English Abstract:

A method of authenticating, using an authentication server, the use of an authentication device over a communication network via an intermediate communication device, comprising: receiving an authentication datagram by said intermediate device; protecting said datagram by said intermediate device, by at least one of changing, adding to, encrypting and signing of said datagram; and forwarding said datagram to said authentication server for authentication.

French Abstract:

L'invention concerne un procede destine a authentifier, au moyen d'un serveur d'authentification, l'utilisation d'un dispositif d'identification sur un reseau de communication par l'intermediaire d'un dispositif de communication. Ce procede consiste a recevoir un datagramme d'authentification en provenance du dispositif intermediaire, a proteger ce datagramme au moyen du dispositif intermediaire par realisation d'une modification, d'un ajout, d'un cryptage et/ou d'une signature dans le datagramme, puis a transferer ledit datagramme vers le serveur d'authentification en vue d'une authentification.

English Abstract:

The interactive authentication system allows a consumer to interact with a base station, such as broadcast media (e.g., television and radio) or PC, to receive coupons, special sales offers, and other information with an electronic card. The electronic card can also be used to transmit a signal that can

be received by the base station to perform a wide variety of tasks. These tasks can include launching an application, authenticating a user at a website, and completing a sales transaction at a website (e.g., by filling out a form automatically). The interaction between the base station and the electronic card is accomplished by using the conventional sound system in the base station so that a special reader hardware need not be installed to interact with the electronic card. The user is equipped with an electronic card that can receive and transmit data via sound waves. In various embodiments, the sound waves can be audible or ultrasonic (which can be slightly audible to some groups of people).

French Abstract:

Le systeme d'authentification interactif permet a un consommateur d'interagir avec une station de base, telle qu'un media de diffusion (par exemple, la television et la radio) ou un ordinateur personnel (PC), afin de recevoir des bons, des offres de vente speciale ainsi que d'autres informations a l'aide d'une carte electronique. La carte electronique peut egalement etre utilisee pour transmettre un signal pouvant etre recu par la station de base afin d'executer une grande diversite de taches. Ces taches peuvent consister a lancer une application, a authentifier un utilisateur au niveau d'un site Web, et a achever une transaction de vente au niveau d'un site Web (par exemple, par remplissage automatiquement d'un formulaire) L'interaction entre la station de base et la carte electronique est accomplie par l'utilisation d'un systeme audio classique dans la station de base de maniere qu'il n'est pas necessaire d'installer un materiel lecteur special pour interagir avec la carte electronique. L'utilisateur est dote d'une carte electronique pouvant recevoir et transmettre des donnees via des ondes sonores. Dans les divers modes de realisation, les ondes sonores peuvent etre audibles ou ultrasonores (lesquelles peuvent etre faiblement audibles pour certains groupes de personnes).

Web services can play a critical role in business operations and workflow. By combining IT and Web services, enterprises can gain business insights that lead to valuable actionable decisions. Web services have the ability to tie in all the business applications within an enterprise, from financial, customer relationship management (CRM), enterprise resource planning, and departmental applications. Now business managers can get a clearer picture of all of its assets and operations. JetBlue Airlines is using Web services to update pilot manuals and flight plans through a paperless system that delivers the content directly to pilots' laptops. Retailer Nordstrom used XML Web services to tie its systems together and establish a standard data format for transferring transaction data. As a result, its Web site was able to accept store-bought gift cards, which it could not do previously. Amazon.com associates can build Web sites and applications that allow them to create Amazon-like sites. As Web services continue to gain adoption, they will have to deal with governance and standards issues.

M&S to join the credit card age

UK: CREDIT CARDS ACCEPTED BY MARKS & SPENCER
Mail on Sunday (AOK) 25 Jul 1999 Financial Mailp.15
Language: ENGLISH

Retailer group Marks & Spencer (M&S) is falling into line with other major chains with a decision to start accepting payment by credit cards in its stores from early 2000. Credit cards will be accepted on its Internet site from October 1999. The company previously only accepted debit cards and its own store card due to the cost of processing other credit cards. Until a new GBt 150mn computer

system was installed in 1999, M&S stores also did not have the right technology for credit cards.

The size and scope of the **electronic bill presentment and payment (EBPP) market** has grown over the last few years as more companies use inventive technologies to enhance internal billing practices and to increase customer use of their **online** offerings. One large user of EBPP is BellSouth, the third largest local phone company in the U.S. BellSouth uses electronic billing to retain visitorship to its Web site as part of a strong commitment to Internet-enabled services. BellSouth expanded usage with an online environment that rewards customers for using EBPP by providing them with such incentives as instant posting of payments, \$20 **gift certificates** to Amazon.com, and entries in sweepstakes. The online billing site is easy to use, requiring only a few clicks to make payments, request changes in service, and contact customer support. The integrated e-commerce site is the choice of about 80 percent of BellSouth's customers who pay bills electronically. Customer participation rises each month by 20 percent, and a spokesperson for BellSouth says 50 percent of all BellSouth customers are expected to use EBPP by 2004. In the short term, EBPP has not saved any money for BellSouth, but the firm knows that consumers who use e-billing become more profitable for BellSouth, fewer are likely to go to a competitor, and many purchase premium services.

Pierre Blayau au 'Figaro economie' / 'Nous preparons les ving procha'

FRANCE: PPR'S ELECTRONIC CATALOGUE PROJECT

Le Figaro (XNV) 14 Feb 1995 p.38

Language: FRENCH

In France, in an interview, Pierre Blayau, the president of Pinault-Printemps-Redoute (PPR), estimated its 1994 earnings at FFfr 1.2mn, and announced that La Redoute will launch Somewhere, a multistandard **electronic** catalogue (in CD-I and CD-ROM versions) on 21 March 1995. This interactive catalogue required an investment of several tens of millions of French francs. FNAC stores will carry it and have demonstration areas available. According to Pierre Blayau, FNAC will be the leading multimedia equipment retailer. By introducing this catalogue, Pinault-Printemps-Redoute is also examining the possibility of eventually selling cultural products through this means. Pierre Blayau said that the group's objective concerning a teleshopping project is to sign a good agreement with several partners, including television operators. Pinault-Printemps-Redoute intends to favour customer service in the future, making it possible for **store card** holders to use them in all of the group's **stores**, to continue providing financial and insurance services, to improve the product selection management, in order to respond to the development of customer tastes.

...with its Internet merchant partners, including Fogdog Sports and Babystyle.com.

So far, though, many online retailers do not have the technology to send gift certificates electronically. Rather, they typically sell traditional gift certificates online, then mail them to recipients, who can redeem them online or offline, depending on the retailer's policy.

And a new Internet business category has emerged in connection with this process...

Donald Spector of Union City, N.J. has designed a computer and printer terminal that he hopes will simplify special occasions. His kiosk offers custom-made greeting cards bearing a gift certificate. A buyer chooses graphics and a message addressed to a specific person for the greeting card, and then selects a monetary figure or an item as a gift to be included in the card. The buyer chooses the store where the certificate can be redeemed, drawing from a list of retail outlets that have Internet sites. The card, with the embedded gift certificate bearing the recipient's name, gift description and store name, is then printed out. Mr...
